

Farm machinery design – Task 5

1. Where do these materials come from?

2. How are these materials made?

3. What are the social and environmental impacts of these materials? Is their production producing any toxic (poisonous) gasses or other harmful products?

4. How do you plan on reducing harmful material use, and how you will safely manage waste products during the production of your piece of machinery.

5. What can farmers do with their old pieces of machinery when they replace them with your new design? How will this effect farm safety or the environment?
